

Nuisance Deer CAN be Controlled!

"Today, deer are the #1 vertebrate pest in the landscape. We offer Deer Guard, because it works! We have seen treated hostas, impatiens, roses and shrubs stand all summer without the hint of damage, while neighbor's untreated landscapes are decimated!"

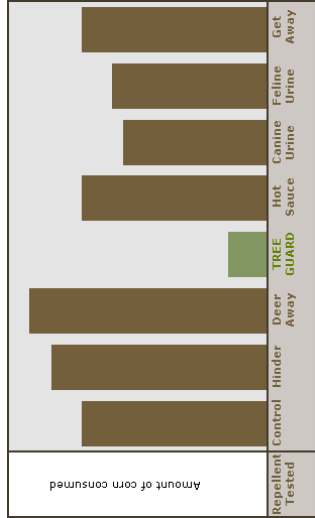

*~Jeffrey Ling, President,
Flock Fighters USA*

Deer herds can devastate a summer garden in one night. No plant is safe. Deer have even been observed walking across decks to feed on containerized flowers. Also, the yearling deer learn from the doe that this garden is a preferred feeding site and return yearly, with their offspring. The cycle continues but with more deer! Hundreds of dollars can be lost in 24 hours.

However, those same plants can be protected with as little as a single spray of Deer Guard. Even in winter, landscapes with evergreens stand bright and green with no loss of foliage due to feeding. Yews, cypress and arborvitae are made safe with one spray.

Winter, Spring, Summer and Fall, Deer Guard can insure the investment in annual flowers, perennials, shrubs and ornamental trees will not become deer feed. With Deer Guard, there are no expensive fences to construct, no gadgets which limit human access to a garden.

Along with being Effective, Efficient, and Essential, Deer Guard is also EASY!

The Minnesota Department of Natural Resources directed Joy McAnich, a nationally recognized expert on white tail deer, to study the effectiveness of leading deer repellents. His tests demonstrate clearly that DEER GUARD® was most effective in those areas of heaviest deer populations.

All about

Deer Guard

Deer repellent for:

- ≡ Flowers
- ≡ Shrubs
- ≡ Trees
- ≡ Seedlings
- ≡ All Seasons

Flock Fighters USA is "the nation's leader in chemical bird aversion," but many have asked for help with other vertebrate pests. Most often it is deer which produce the concern.

Many remedies have been touted and they fail! Fences limit the property access and are costly.

Deer Guard works on all plants. We have seen it work with many testimonials. Contact us for more information.

Now there is a solution to deer free gardens!

FLOCK FIGHTERS USA

Deer Guard is EFFECTIVE.

People spend a good amount of time, money and energy to ensure that their landscaping looks attractive. Unfortunately, the plants that people enjoy are the same plants enjoyed by animals.

Deer, for example, have become an increasingly difficult problem for many gardeners and property owners. It isn't hard to tell if deer have been making a meal of your site. Deer don't have upper incisors, so look for a ragged, squared, torn appearance at the end of browsed twigs.

Through the years, many home remedies have been rumored to alleviate this situation, all of which have resulted in continuous deer problems. From spraying hot sauce on plants, to hanging ultrasound "deer deterrents", gardeners have tried everything! Although they may provide initial results, the deer are always cunning enough to overcome whatever obstacle they are given.

What is a gardener or site manager to do, then? Fortunately, a solution has been found! Research has shown that Deer Guard is one of the most effective deer repellents available today.

WHAT is Deer Guard?

Deer Guard is a pre-mixed, ready-to-use deer repellent that sprays on milky and dries clear. The active ingredient, bitter

Deer Guard is EFFICIENT.

tasting Bitrex, is locked onto the plant surface forming a "protective jacket" which resists dew, snow, rain and vaporization. The result is an effective, long-lasting, repellent.

Deer Guard may be used on any non-food plant, and poses minimal risk to deer, plants, people and the environment.

WHY does Deer Guard work?

Deer Guard's main ingredient, Bitrex, is the bitterest compound known to man (and deer!). It is inert and odorless, but only tiny amounts are needed to make products taste unpalatable.

Macfarlan Smith discovered denatonium benzoate in 1958 and named it Bitrex. Since being approved in the US in the early 1960s, Bitrex has been officially recognized as the denaturant of choice in more than 40 countries, and used in a variety of products, such as disinfectants, bubble baths, antifreeze and insecticides.

In Deer Guard, a unique latex polymer carries the Bitrex and holds it to the surface of the plant, resisting rain, and wash-off for up to 100 days. New plant growth will need to be protected as it develops.

A detection agent is also incorporated, permitting deer to identify which plants have been treated, eliminating the need for deer to taste your plants to detect the

Deer Guard is ESSENTIAL.

Deer Guard.

HOW is Deer Guard used?

Deer Guard is pre-mixed and ready to use from the container. One gallon protects 1,000 square feet of plant material. Note that two light coats provide better protective results than a single heavy application.

Wear gloves during application. Deer Guard must be completely dry in order to adhere properly during rain or snow, so be sure to allow time for drying.

Deer Guard, when applied, has a milky color, but will dry with a clear sheen.

WHERE can I buy Deer Guard?

Deer Guard is available in one quart spray bottles and one gallon containers from Flock Fighters USA. Shipping and Handling is waived on all case orders of Deer Guard

Flock Fighters USA is committed to your success! We offer free support with all purchases, and will even treat your site for you. Call for an estimate.
