

## Fogging with Fog Force

Nuisance birds cause many concerns. As bird populations increase, so do the risks. Flocks of birds and persistent individuals produce negative consequences.

Until now, there have been few options for the control of the flocks of birds that invade and contaminate a site other than killing them. Many gimmicks have been promoted, proven as failures, and discarded: nuisance bird populations and problems continue to grow.

Fog Force is a bird repellent that may be used indoors and outdoors to repel all types of birds, including starlings, blackbirds, gulls, Canada geese and any other bird that has become a nuisance or a health hazard in an area.

Rejexit Fog Force is to be applied only by aerosol-producing equipment. Do not apply with spray equipment. Spray equipment produces droplet sizes that are too big: the birds will not react and the risk of phytotoxicity (plant damage) or oil stains is considerable.

Cold weather operation will require special considerations. Winter Agent for Fog Force makes fogging in cold weather easier!

# Winter Agent

## What is Winter Agent?

 Winter Agent For RejeX-it Fog Force® is a cold weather additive, utilized to reduce viscosity of RejeX-it Fog Force® in sub-freezing operations. This new science gives the PCO a new tool to fog birds in adverse winter weather.

RejeX-it Fog Force® is an oil base product which increases in viscosity as temperatures drop. In temperatures below 30° F, it begins to thicken, just like diesel fuel.

Winter Agent is a blend of food grade oils and light hydrocarbon distillates. It will inhibit the increased viscosity produced by colder temperatures and will help applicators to achieve the same results as fogging in warm weather.

For temperatures of +20°F to -10°F utilize a 50:50 mixture. After the Winter Agent is added, re-calibrate the operation's cycle of the aerosol generation equipment to accommodate for the reduction of Methyl Anthranilate in the delivery.

Winter Agent For RejeX-it Fog Force® is fully compatible with thermal and ULV foggers. Any and all fittings and hoses, which are compatible to Methyl Anthranilate, will be resistant to Winter Agent For RejeX-it Fog Force®.

There are no negative affects should mixtures of Fog Force® Winter Agent be utilized in warmer weather.

## Why is Winter Agent Needed?

In the temperate zones, many bird species gather together and reside in large flocks. This creates two different, yet very dramatic consequences.

In sites where birds feed, the pressure is intense, and for locations with commodities: farms and feedlots, grain processing sites, food production facilities, hotels, restaurants and resorts can face nuisance bird issues. Landfills have high pressure year around, but the winter can be even more intense.

In winter roosts, the large increase of bird numbers means rapid accumulation of manure. This can be most grievous in locations where heat is generated and there are plenty of roosting opportunities.

Many different species can cause these problems, but there is a solution to solve all the problems and expel every species: fogging RejeX-it Fog Force®.

One difficulty encountered in this solution is winter operations. The oil nature of Fog Force makes it thicken in temperatures below 30°F and gel in < 0°F. This physical condition stops the production of aerosols.

Winter Agent is created as an adjuvant, to reduce the gel point, so outdoor fogging can be successful. Added to the Fog Force on-site it provides cold weather performance not available in any other way.

If you have questions about the nuisance birds in your area, please contact us. We would be happy to discuss the specifications of YOUR site.

## Who is Flock Fighters USA?

FLOCK FIGHTERS USA is experienced in the application of all Methyl Anthranilate (MA) products: we have expelled more birds than any other applicator. We also supply more product and equipment than any other supplier.

FLOCK FIGHTERS USA recognizes that each site is unique in need: by geography, by climate, by function, and by numbers and species of birds. We administer technologies and procedures to match the requirements of each site and species of birds.

FLOCK FIGHTERS USA will implement a system specifically designed for the requirements of your site. If you would like to engineer your own system, we will provide you with the training and support necessary to help you expel your nuisance birds.

**FLOCK FIGHTERS USA continues to lead the way in aerosol bird aversion through the development and utilization of new technologies.**
